PERSONAL PROJECTS

Geographic Information Systems(GIS)
- A Geographic Information System (GIS) is a computer system that analyzes displays geographically referenced information . It uses data that is attached to a unique location.
- Traditional paper maps are in different scales and projections . To get a single integrated maps , the maps need to be covering the same area .
- In GIS, detail information about each feature can be noted. To get a single integrated map, the maps need to be converted into the same scale covering the same area. Also, it can convert a map of any scale to another scale.
